Continuation of Attachment(s) 9. Other: This application was re-searched, in class 257, subclasses 40, 79, 704, 730, 734, 737, 738; class 313, subclasses 498, 512. This research was ineffective. However, a reference of interest is cited. Silvernail et al. (US 2002/0125484 A1) teach relating to an organic optoelectronic device structure (OLED) and in Fig. 1B Silvernail shows a substrate 120 with a device region which is OLED 140 positione don the substrate; a cap 150 to encapsulate the device; and spacers 135 on the substrate 120 to support the cap 150. However, Silvernail fails to teach and/or suggest a first surface of the substrate having a first width which is wider than an upper portion.
